

Invisible Vent INV70

Application

The INV70 vent from J.A. Plast is concealed under the original roofing material, which makes it almost invisible and particularly suitable for flat roofing profiles. The vent is suitable as outlet of air from living quarters like kitchen, bathroom, or laundry room.

Please refer to national standards.

- For pitched roofs min. 40°
- 7,000 mm² ventilation area
- Can be manufactured for shingle profiles only

Design

The INV70 vent is designed with an extra base plate to divert rainwater safely back onto the roof surface. A protective grille keeps out insects and drifting snow.

Parts of the original roofing material are installed on the element, making installation quick and simple. The result is very discreet - almost invisible.

The FS7 and P9 adapters allow for connection of Tubivent.

Colour and Surface

The vent is concealed under the original roofing material. Surface treatment is unnecessary.

Materials

Vent and adapter: HIPS (High Impact Polystyrene).

Tubivent: PE (PolyEthylene).

Handling

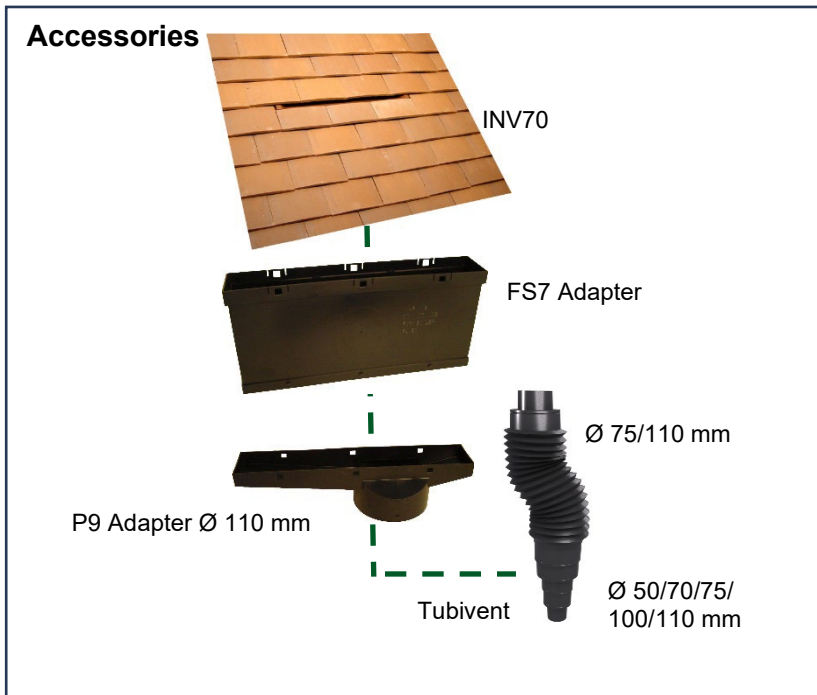

Keep in original packaging during transport.

Do not wrap and expose to heavy load during transport.

Remove plastic bag before placing in sunlight.

Accessories

Roofing accessories supplied from J.A. Plast match roof profile, colour and surface 100%. The current product list and further information can be found on our homepage, www.japlast.com.
